FIX Explorer™

Powerful FIX Specification Editor

Easily define, manage, and communicate your FIX service offering

FIX Explorer™ is an intuitive, user-friendly desktop application.

Use Explorer to define your FIX Service offering:

Enhance productivity by saving time and effort

Define your FIX service offering based upon one of the standard versions of FIX.

Easily add customizations and identify the specific messages, fields, and values you support.

Capture a specification from an existing FIX implementation.

Generate Microsoft Excel® spreadsheets to support mapping exercises.

Generate dictionaries for FIX products including QuickFIX.

Improve communication

Use FIX Explorer™ to automatically produce a high quality customisable rules of engagement document in Microsoft Word®.

Generate a Web Browser version of your FIX service offering that can be easily integrated into your website.

Improve quality by reducing errors

Eliminate the all too common typographical errors and omissions that occur when specification documents and software artifacts are created manually.

Create both the software artifacts and documentation from a repository that can reside in any industry standard version control system so that your service and your documentation are always in sync.

Technician

Detective

Lasabtech

FIX Explorer™ addresses one of the most overlooked areas when creating a FIX service: the design, publication, and maintenance of the specification.

If you have an existing implementation, you can capture a specification from your existing service. You can then enrich your definition with additional textual descriptions.

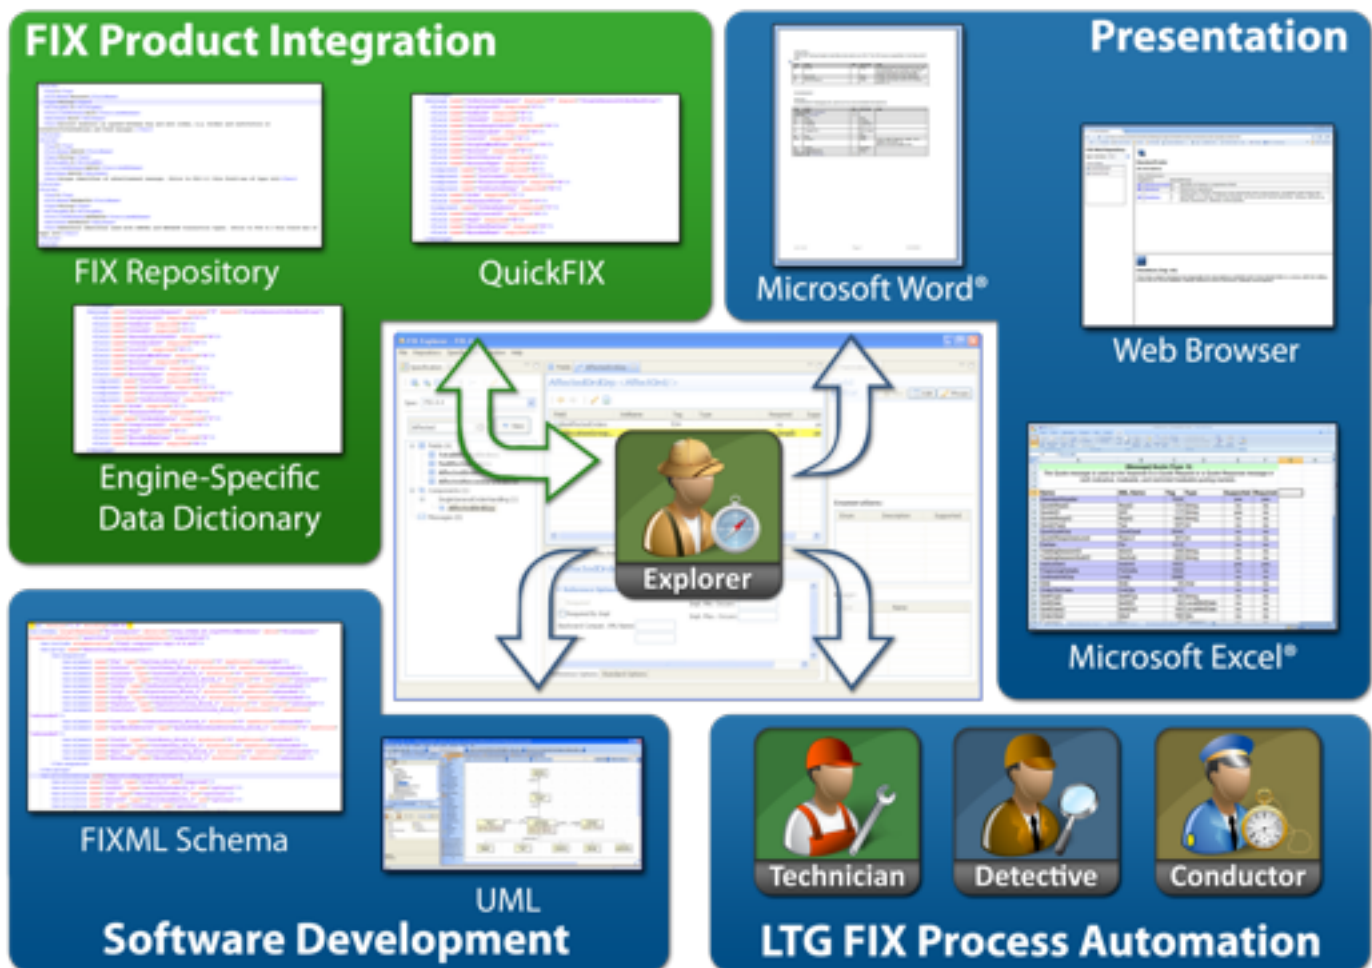

Once you have finalised your implementation, FIX Explorer™ provides powerful tools to generate the documentation and output files in Microsoft Word® format as well as a hyperlinked Web Browser based specification. This greatly reduces the manual labor and errors involved in maintaining multiple artifacts.

But this is just the starting point...

FIX Explorer™ also can generate custom data dictionaries for a variety of FIX software products, a FIXML Schema from your specification, and industry standard UML models.

No longer does your documentation have to be out of sync with your implementation!

In addition to automating the process of specification creation, FIX Explorer™ is an incredible desktop reference for FIX.
